Claude SMB Workshop

Hello, *Muskegon!*

Your hosts, our partner, and the lab behind Claude

Who we are

GRCC
GRAND RAPIDS COMMUNITY COLLEGE
AI Incubator

YOUR HOSTS

Jonnathan Resendiz - *AI Incubator Faculty Director*
GRCC - Approved Claude SMB Trainer

CC

Clayton Corrello - *Co-teacher*
Muskegon Community College

In partnership with **The Right Place** and **Muskegon Community College**

ANTHROP\C

A Public Benefit Corporation, whose purpose is the responsible development and maintenance of advanced AI for the long-term benefit of humanity.

Safety
Designed to say when it doesn't know.

Security
No training on Team plan data by default.

Trust
Honest answers. Ad-free.

Research
AI research lab.

Put AI to work.

Three things you'll learn today

01 **An approach to AI fluency**

The 4D framework and power moves that work on any model

02 **An AI workflow**

A real thing, on a real problem from your business, that takes input and produces output

03 **Confidence to execute**

Time spent through the learning with your peers

The mental model.

The lens you'll carry into the build room. It works on any AI tool.

A mental model

Think of AI as a brilliant new hire.

Working with AI well isn't technical. It's a management skill *you already have*.

Your scaffolding for the recipe ahead

Anthropic’s AI Fluency Framework: The 4Ds

Outer loop

Around your AI use

Delegation

What to hand AI

- Which pieces benefit from AI?
- Which pieces need *your* judgment?
- What's the cost of getting it wrong?

Diligence

Own the outcome

- Validate against past correct results
- Be transparent about AI's role
- Don't ship what you don't stand behind

Inner loop

In your AI conversations

Description

Tell AI what you need

- Who is it for?
- What format?
- What does “good” look like?
- What shouldn't it do?

Discernment

Judge what you got

- Is it accurate?
- Does it sound like you?
- What's missing?
- What needs pushback?

One continuous cycle: delegate → describe ⇄ discern → act with diligence.

How trust gets built

Start with the busywork. Grow into a partner.

THIS WEEK

Busywork

Pick the one job you’d be glad to never do by hand again.

- Data entry and reformatting
- First drafts of anything
- Summarizing long documents
- Pulling numbers together

WITHIN A MONTH

Routine you review

It runs on a schedule. You approve, you don’t assemble.

- Customer replies and follow-ups
- Weekly and monthly reports
- Reminders and chasing
- The brief waiting on Monday

BY MONTH THREE

Strategic partner

You start asking it what you’re missing.

- Pricing and margin scenarios
- Which customers to focus on
- What the numbers are telling you
- Pressure-testing a decision

Nobody starts at month three. Everybody starts this week.

Owners tell us this is their #1 concern

Is your business data safe with Claude?

Not training data

Team and Enterprise plans: not used for training by default. Pro and Max: you choose in Settings. You own what goes in and what comes out.

Your permissions hold

Claude reads only what your account can already see. Encrypted in transit and at rest.

Independently audited

SOC 2 Type II, ISO 27001 and ISO 42001 on business plans. Reports at trust.anthropic.com.

For Team and Enterprise, it's in Anthropic's commercial terms. On Max, you control it in Settings.

Watch it work

Live *demo.*

How I run my work with Claude.

Folders, two plain text files, and a routing map. I call each folder an HQ.

The problem

A new hire who forgets everything overnight

Chat alone

- You explain your business again every morning
- Yesterday's correction is gone
- Results depend on how well you typed today
- Nothing is written down

With an HQ

- The rules are read before every task
- "Remember this" sticks
- A one line prompt gets the whole job done right
- The folder is the training manual

Same model. The difference is what it reads before it answers.

The building block

An HQ is a folder with a job

what's inside

```
Quoting HQ/
├── CLAUDE.md          instructions
├── MEMORY.md          memory
└── Quoting HQ Resources/
    ├── price-list.md    knowledge
    └── past-quote.md    knowledge
```

Instructions · CLAUDE.md

Rules that always apply. Who Claude is here, the steps, what it never does.

Memory · MEMORY.md

What changes over time. Customers, open work, decisions and why.

Knowledge · Resources folder

Reference material. A price list, a past quote, a template.

The .md files are plain text. If you can make a folder and read a text file, you can build one.

Two files, two tests

Rules go in one file. Facts go in the other.

CLAUDE.md

Does it tell Claude how to behave?

Look for always, never, before you do X.

```
If you're not sure about something, say
so. Don't guess.

Give me one strong recommendation.
```

MEMORY.md

Is it a fact that could change?

Contacts, status, decisions, things you said to remember.

```
My company uses Google Workspace.

I'm a department head and I direct the AI
Incubator.
```

Not sure which file? Claude asks.

My real setup

Nine HQs, one Routing Map

One HQ per hat I wear. Each row of the map starts: "Route here when I..."

My courses

...edit course content and pages

Department head

...handle scheduling, budget, hiring, meetings

Federal grant

...work on grant reporting and deliverables

My doctorate

...do coursework or dissertation work

Workshops

...prepare and run workshops like this one

Apprenticeships

...work on an employer apprenticeship partnership

Faculty council

...prepare for faculty governance business

Faculty evaluation

...work on the faculty evaluation process

Personal

...handle family and personal matters

I say what I'm working on. Claude picks the folder.

Loading an HQ

What happens before Claude answers me

01

Open the workspace

A new chat, with my one workspace folder selected.

02

Say the task

"Draft the agenda for Thursday's department meeting."

03

Claude routes it

Checks the Routing Map and picks the HQ.

04

Reads top to bottom

Root rules, then the HQ's rules and memory, then the subfolder's.

05

Then it works

Shows me a plan and waits for my OK.

Three folders deep means three rule files and three memory files. Every time.

How the rules grow

Every rule has a date and a reason

From my CLAUDE.md, shortened

```
Before building a deliverable from scratch, show the proposed structure first and wait for approval.

Added 2026-09-23 after I asked to see the plan before a schedule summary was built.
```

```
When a document goes to someone outside this workspace, spell out internal jargon and cut internal tracking.

Added 2026-09-23 after an internal abbreviation went out in a summary.
```

```
After saving a file to my computer, read it back to confirm the change landed.

Added 2026-10-04 after three saves reported success and left the old version.
```

I don't write the rulebook. I correct Claude once, and it writes the rule.

Your turn. Build it.

Everything you paste today is in the guide, with a copy button.

Start here

Open the guide

SCAN, OR TYPE

github.com/grcc-resendiz/ai-manufacturing-muskegon

Our training page, same as Days 1 and 2. Go to Day 3.

BEFORE WE START

- Claude desktop app open, and you're signed in
- Your Claude Max code redeemed at claude.ai
- The guide open next to Claude

Follow your company's AI policy before company information goes into any AI tool.

Part 1 · Step 1

ADDS: INSTRUCTIONS

Let Claude interview you

1. Start a new chat. Paste the interview prompt from Step 1.
2. Answer four quick questions, one at a time.
3. Paste the result in Settings, then Your Claude, under Instructions.

EXPECT

- An "About Me" section
- A "How to Work With Me" section
- Under 300 words, ready to paste
- It applies to every chat from now on

You didn't write a prompt. Claude interviewed you.

Part 1 · Step 2

ADDS: INSTRUCTIONS

Add your guardrails

1. Copy the guardrails from Step 2.
2. Same Instructions box: paste them below your preferences. Save.
3. From now on, Claude shows you a plan and waits.

WHAT CHANGES

- Reads your folder's rules and memory first
- Asks before deleting, overwriting, or renaming
- Shows a plan before multi step work
- Asks before sending anything

When Claude stops and waits, say: "Looks good, go ahead."

Before Part 2

Claude works in one folder you pick

One folder	Claude sees only the folder you pick. No folder, no files.
Read and write	Inside it, Claude can read, create, and change files. That's how it writes your rules and memory.
Start empty	We make a brand new folder, so nothing of yours is in reach today.

GOOD TO KNOW

- Files Claude reads are processed on Anthropic's servers, like anything you type.
- Your guardrails still apply: it asks before deleting or renaming.
- Work laptop blocks it? That's IT policy. Pair with a neighbor today.

An empty folder today. Your real files only when you decide.

Part 2 · Steps 3 and 4

ADDS: INSTRUCTIONS + MEMORY

Create your workspace

1. Make an empty folder called Claude Workspace.
2. New chat. Click "Work in a folder" and pick it.
3. Paste the Step 3 prompt. Then the Step 4 interview.

you should see

```
Claude Workspace/
├── CLAUDE.md       the rules
├── MEMORY.md       the notepad
└── 00_Resources/
    └── voice-principles.md
        (how you write)
```

Every chat today starts this way: new chat, then "Work in a folder."

Part 3 · Step 5

ADDS: MEMORY

Test it: "Remember this"

type

```
Remember this: I don't take meetings
before my second cup of coffee.
```

then, in a new chat (same folder)

```
When's a good time to schedule a meeting
with me?
```

LOOK FOR

- Claude confirms it saved the line to MEMORY.md
- In a new chat, it steers you away from early morning
- It used the fact. It didn't just repeat it.

Your first win. It will still know this next week.

A fictional company for today's build

Meet Example Equipment Co.

Who

60 people in West Michigan. Custom conveyors for food and industrial plants.

Quoting

Request by email. Engineer scopes it, estimator prices it, quote goes out.

The pain

Customer details live in people's heads and get retyped every quote.

Its HQ

Instructions, a price list, a past quote, and a memory file.

Customers: A, snack food plant. B, pet food plant. C, automotive parts plant.

Part 3 · Step 6

ADDS: ALL THREE PARTS

Build the HQ

1. Open Step 6 in the guide and copy the one prompt.
2. Paste it in a new chat with your workspace folder selected.
3. Read the plan. Say: "Looks good, go ahead."

you should see

```
Example Equipment Co. HQ/
├── CLAUDE.md      instructions
├── MEMORY.md      memory
└── ...HQ Resources/
    ├── price-list.md   knowledge
    └── past-quote.md   knowledge
```

Three parts. One paste.

Part 3 · Step 7

Prompt 1: Draft a quote

type

```
Draft a quote for this Example Equipment
Co. request:
```

Then paste Customer A's request from the guide. Start a new chat in your folder first.

EXPECT

- Our quote format
- Painted steel prices
- The 5 percent surcharge
- A total of about $35,070

The surcharge isn't in the past quote. It came from memory.

Part 3 · Step 7

Prompt 2: What's open

type

```
What Example Equipment Co. quotes are
open, and what's due first?
```

EXPECT

- Customer C, due November 12
- Customer A, due November 13
- A still shows as open

Use it like a coordinator, not just a quote machine.

Part 3 · Step 7

Prompt 3: The guardrail

type

```
Customer A also wants a metal detector on
this conveyor. Add it to the quote.
```

EXPECT

- "Not on the price list, needs an estimate from engineering"
- No made up price
- The total stays at $35,070

One line in the instructions: never give a price that isn't on the price list.

Part 3 · Step 7

ADDS: MEMORY

Now, remember this

type

```
Remember this: Customer A requires
stainless steel frames and guarding on
every conveyor in their plant because of
daily washdown.
```

EXPECT

- Claude tells you where it saved it
- Ask: "Show me that memory file." The fact is on Customer A's line.
- Nothing else changed

You didn't open the file. Claude did the upkeep.

Part 3 · Step 7

Ask again

type

```
Redo the Customer A quote for Example
Equipment Co.
```

Start a new chat in your folder first, so nothing carries over.

EXPECT

- Stainless frame and guarding
- A washdown rated motor, on its own
- About $64,785

Same request. Same tool. A different answer.

Debrief

Before and after

	Before	After
Conveyor frame, 40 ft	$18,000	$40,000
Guarding, 40 ft	$5,000	$10,000
Motor	$2,200	$3,500
Total with surcharge	**$35,070**	**$64,785**

Same request. Same tool. One saved fact nearly doubled the quote.

Why it worked

An HQ is the 4Ds, written down once

01

Delegation

The Identity paragraph and the Routing Map say what goes to Claude and what stays with you.

02

Description

CLAUDE.md is the brief. Written once, read every time.

03

Discernment

Each correction becomes a rule, so you only catch a mistake once.

04

Diligence

MEMORY.md records decisions and why. Guardrails make Claude wait for your OK.

The brief stops living in your head and starts living in the folder.

Q&A *Pause.*

Description: the unlocks

Four power moves

When output is "fine but not great": reach for one of these.

Think first

"Before you answer, think step-by-step about what I'm actually asking." Forces reasoning, not pattern-matching.

Meta-prompt

"What questions should I be asking you to get a better output?" Let it interview you. Free consulting.

Ask for three

"Give me three different approaches, then tell me which you'd pick and why." Options beat a single guess.

Show an example

"Here's one I wrote that worked. Match this voice." Examples beat instructions every time.

Your turn, out loud

What's the one task you'd *hand off first?*

Picture this week. The job you'd give away if you could. Think for ten seconds, then shout it out.

Part 4 · Your own HQ

Which HQ would you *build first?*

Name the folder. Then write one rule, one fact, and one file it needs.

Part 4 · Step 8

Pick a starter, or start from scratch

01

Requests and Quotes

RFQs, estimates, quotes, follow ups.

02

Quality

Nonconformance reports, corrective actions, customer responses.

03

Maintenance

Downtime, preventive maintenance, work orders.

04

Safety and Training

Work instructions, toolbox talks, onboarding.

None of them fit? Step 8 builds your own from five questions. Fill in one blank and paste.

One HQ per job. Start with the job you'd hand off first.

Starter HQ · 01

Requests and Quotes HQ

Route here when I am answering an RFQ or building a quote

CLAUDE DOES

- Reads the request and lists every requirement
- Flags what is missing or tighter than standard
- Builds the cost breakdown from your price list, math shown
- Drafts the quote and the cover email

YOU KEEP

- The margin and the final price
- Every lead time promise
- Hitting send

once it's built, try

```
Work the RFQ I just dropped in.
```

good files to add

Your price list or rate card, two or three past quotes, your standard terms.

Starter HQ · 02

Quality HQ

Route here when I am writing up a nonconformance, a corrective action, or a customer response

once it's built, try

```
Start the write up for last night's
issue. Ask me what you need.
```

good files to add

Your blank report template, an export of your log, one past report done well.

CLAUDE DOES

- Drafts the nonconformance report on your template
- Walks you through 5 Whys, one question at a time
- Checks your log for repeats in the last 90 days
- Drafts the corrective action and the customer response

YOU KEEP

- Disposition: use as is, rework, or scrap
- Every measurement and quantity
- Your signature

Starter HQ · 03

Maintenance HQ

Route here when I am planning preventive maintenance or looking at downtime

CLAUDE DOES

- Finds the top causes of downtime by minutes
- Matches them against overdue PM tasks
- Recommends one fix first, with the math
- Drafts the work order, lockout and tagout as step one

YOU KEEP

- Approving every work order
- PM intervals: never skipped, never stretched
- Who works on which machine

once it's built, try

```
What should we fix first?
```

good files to add

Last month's downtime log, your PM schedule, one manual's troubleshooting section.

Starter HQ · 04

Safety and Training HQ

Route here when I am writing a work instruction, a toolbox talk, or onboarding material

once it's built, try

```
Turn the notes I just dropped in
into a work instruction for a new
operator.
```

good files to add

Your work instruction template, a lead's rough notes on one job, one instruction people follow.

CLAUDE DOES

- Turns a lead's rough notes into a work instruction
- Puts each safety point next to its step
- Lists the gaps for you to check on the floor
- Offers a toolbox talk, a quiz, and a Spanish draft

YOU KEEP

- Every safety requirement: none invented, none removed
- Safety lead review before anything is posted
- Fluent speaker review of any translation

More HQ ideas

Three every business can use

Email HQ

Sorts the inbox into four groups and drafts the routine replies in the right thread.

Drafts only. Never sends, deletes, or archives.

Meetings HQ

Turns raw notes into decisions, action items with owners and dates, and open questions.

Never guesses an owner.

HR and Hiring HQ

Drafts the job posting, interview questions, and a day by day first week plan.

Never screens or ranks real applicants.

Email HQ is where a connector earns its keep.

Before you trust it

Guardrails for Claude, and for you

TELL CLAUDE

- Before deleting, overwriting, or renaming a file, show me and wait.
- On any multi step task, outline a plan first.
- Before sending email or taking any outside action, show me and wait.
- If you are unsure which file to change, stop and ask.

ASK YOURSELF BEFORE IT GOES IN THE FOLDER

- Customer drawings and specs under NDA: read the agreement first.
- Export controlled work: talk to your compliance lead first.
- Personnel and medical records: keep them out.
- Passwords and access tokens: never.

You own what goes in. So decide what goes in.

Part 4 · Step 9

Make it yours: one file, one line

1. Drag one safe file into your Claude Workspace folder.
2. Tell Claude you dropped it. It files it in the right HQ.
3. New chat, same folder. Give your HQ a one line job.

EXPECT

- Your steps, followed in order
- A stop where you told it to stop
- A mistake or two. Correct it, then say "remember this."

Show and tell: what job does your HQ do, and where does it stop?

Connectors in plain terms

A connector is a plug

It lets Claude read, and with your OK act, inside a tool you already use.

Read	Claude can look. It cannot change anything.
Write	Claude can act, and it asks you first.
Yours to switch off	You sign in to each tool yourself. Claude never sees your password. Disconnect anytime.

WITHOUT ONE

Export, copy, paste, repeat.

WITH ONE

Ask about the real thing:

"*What are my most recent emails about? Summarize the top 5.*"

Start with one: email or calendar. Add the next when you miss it.

Part 5 · Step 10

ADDS: A CONNECTOR

Connect a tool and test it

type

```
What are my most recent emails about?
Summarize the top 5.
```

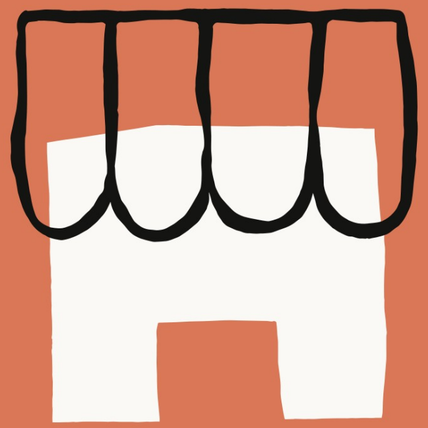

Or: What does my schedule look like this week? Any conflicts?

EXPECT

- Your real inbox, summarized
- Nothing sent, nothing changed
- Work account blocked? Use a personal one today.

This is your real data, not a template.

Claude for Small Business

Works in the Claude desktop app on any paid plan (Pro, Max, Team and Enterprise plans)

Introducing the plugin

WHAT

A plugin in Claude

43 ready-to-run workflows and
37 connectors that put Claude inside the tools small businesses depend on.

WHY

An AI “new hire” for your team

Claude does the work and **you approve** before anything sends, posts or pays.

HOW

Four steps to turn it on

In the Claude desktop app:

1) Customize
2) Plugins
3) Install “Small Business”
4) Then type **/smb-onboard**.

Small Business

by Anthropic · 1.35.1 · 44 skills · updated Oct 1

Try in Cowork

Overview | Contents | Skills · 44 | Connectors · 35

Adoption	Activity	You
2	3	2
users in your organization · 30 days	runs · 30 days	runs by you · 90 days

Description

Pre-built small business workflows to help you run and grow your business. Supports a majority of the tools you already use. You approve every step that touches money or customers. Install and then ask Claude to help you get onboarded.

Categories

Operations | Databases | Files & documents | Finance | Tickets & tasks | Email & messages | Contacts & leads | APIs

Connectors & tools

- Can send data to other services
- airwallex-agentos

The Small Business plugin

Claude for Small Business Workflows

Common Claude workflows for small businesses

Reporting on the business

/business-pulse
Cash, sales, pipeline, and this week on one page.

/monday-brief
The week ahead and your top 3, every Monday.

/sales-brief
What's selling, what isn't, and what to push.

Running the business

/social-content-engine
Drafts next week's posts for your OK.

/invoice-chase
Overdue reminders, sent via PayPal on approval.

/close-month
Reconciles the books, writes the P&L story.

Growing the business

/speed-to-lead
Qualifies new inquiries and drafts a reply with open times.

/proposal-builder
Builds a priced proposal from a voice memo, photos, or RFP.

/customer-pulse-check
Feedback themes, with a draft reply for each.

The plugin in a manufacturer's front office

Where the workflows fit in a shop

My mapping for this room. Check the connector list for the systems you run.

`/proposal-builder`
An RFQ email becomes a priced first draft quote

`/speed-to-lead`
A new customer inquiry gets a same day reply

`/monday-brief`
Monday morning: the week ahead and your top three

`/close-month`
Month end reconciliation and the story in the numbers

`/customer-pulse-check`
Themes in customer feedback, with a draft reply for each

`/job-post-builder`
A posting for the operator or tech you need to hire

The plugin covers the front office. Your HQs cover the floor.

The plugin and your HQs do different jobs

The Small Business plugin

- Ready made workflows you run with a command
- Connects to the tools your front office runs on
- Type it, review it, approve it

Your HQs

- Your rates, machines, customers, and rules
- Works from files you drop in a folder
- Covers what no ready made workflow knows about your shop

Use both. Your HQ is built. Now turn on the plugin.

Part 6 · Steps 12 and 13

Turn on the plugin

1. Customize, then Plugins. Click the plus.
2. Install Small Business.
3. Type /smb-onboard and answer its questions.

EXPECT

- The Small Business toggle is on
- A short interview about your business
- Help connecting a tool or two

Then try /monday-brief or /proposal-builder, and judge it with the four Ds.

How they did it.

Two real operators. One repeatable recipe. Watch the 4Ds do the work.

The 4Ds as a recipe: you'll see it twice

Every automation, same four Ds

01

Delegation

Write down the steps you do by hand. Which go to AI, which stay with you. Draw the line on purpose.

02

Description

Output, audience, style, behavior. Brief it like a new hire. Give it context and connect your tools.

03

Discernment

Judge what comes back. What’s wrong, what’s missing, what needs pushback. Fix the brief, go again.

04

Diligence

Run it on work you’ve already done. Trust only what you’ve checked. You own what ships.

Keep iterating if you're not getting the output you want. Talk to the AI, show it what's off, and workshop it together until it lands.

Delegate → Describe → Discern → Diligence. That's the whole thing. Now watch two people do it.

How they did it · 01

Turning accounts payable into a Monday routine

Corey · Prospect Butcher Co. · Brooklyn · 2 locations · ~30 vendors · 2 billing systems

"*Paying bills wasn't on the calendar, it followed me home.*"

01 · Delegation

The task, the split

2–3 evening hours a week, two billing systems

AI

Pull invoices, scan email, compute cash, recommend

COREY

Every payment decision, every vendor call

02 · Description

The brief

"Every Monday: snapshot, then vendor-by-vendor suggestions with reasoning shown. Everything's a recommendation. Assume nothing."

03 · Discernment

What came back

It defaulted to pay-biggest-first: sensible-sounding, but backwards for his business. Only the owner catches that. Fixed the logic, re-ran.

04 · Diligence

Before trusting it

Tested on past months where he knew the right answer before it touched a live week. Payments still go out on his say-so.

Three scattered evening hours → *45 focused minutes* on Monday. Vendors get paid consistently now.

How they did it · 02

Bidding a 99-unit building from a PDF blueprint

Tony · Professional Painters · Chicago suburbs · 5 employees · painting contractor since 1984

"*I wouldn’t just let it output stuff. All along I’d say, ‘Show me your work.’*"

01 · Delegation

The task, the split

Blueprint in; wall, ceiling, door, window and woodwork counts out before he can price

AI

Read the blueprint, do the takeoff, list it floor by floor

OWNER

Pricing per sq ft and gallon; the final number

02 · Description

The brief

"Walls and ceilings separately. Woodwork in linear feet. Count every window and frame. Break it out floor by floor so I can spot-check any hallway."

03 · Discernment

What came back

First pass used floor area × a multiplier: "we don’t do it that way." Re-briefed it on how his company measures.

04 · Diligence

Before trusting it

Did one two-bed unit by hand first and compared the numbers. "Show me your work" at every step, then let it run the other 98.

~$500,000 itemized bid. Dropped a $200/month estimating tool.

Win story

Rancho Cordova, CA

Bedroom & Sofa Discounters

The owner attended the San Jose Claude for Small Business workshop in June 2026. These are the results so far.

THE BUSINESS

Retail · furniture
Open since 2001
5–10 employees · no technical staff
24,000 sq ft showroom

WHAT IT GIVES BACK SO FAR

≈23 hrs/mo

back per month ≈ $690/mo at $30/hr

$3–5K/mo saved since June SMB workshop

WHAT RUNS NOW · NINE SAMPLE WORKFLOWS

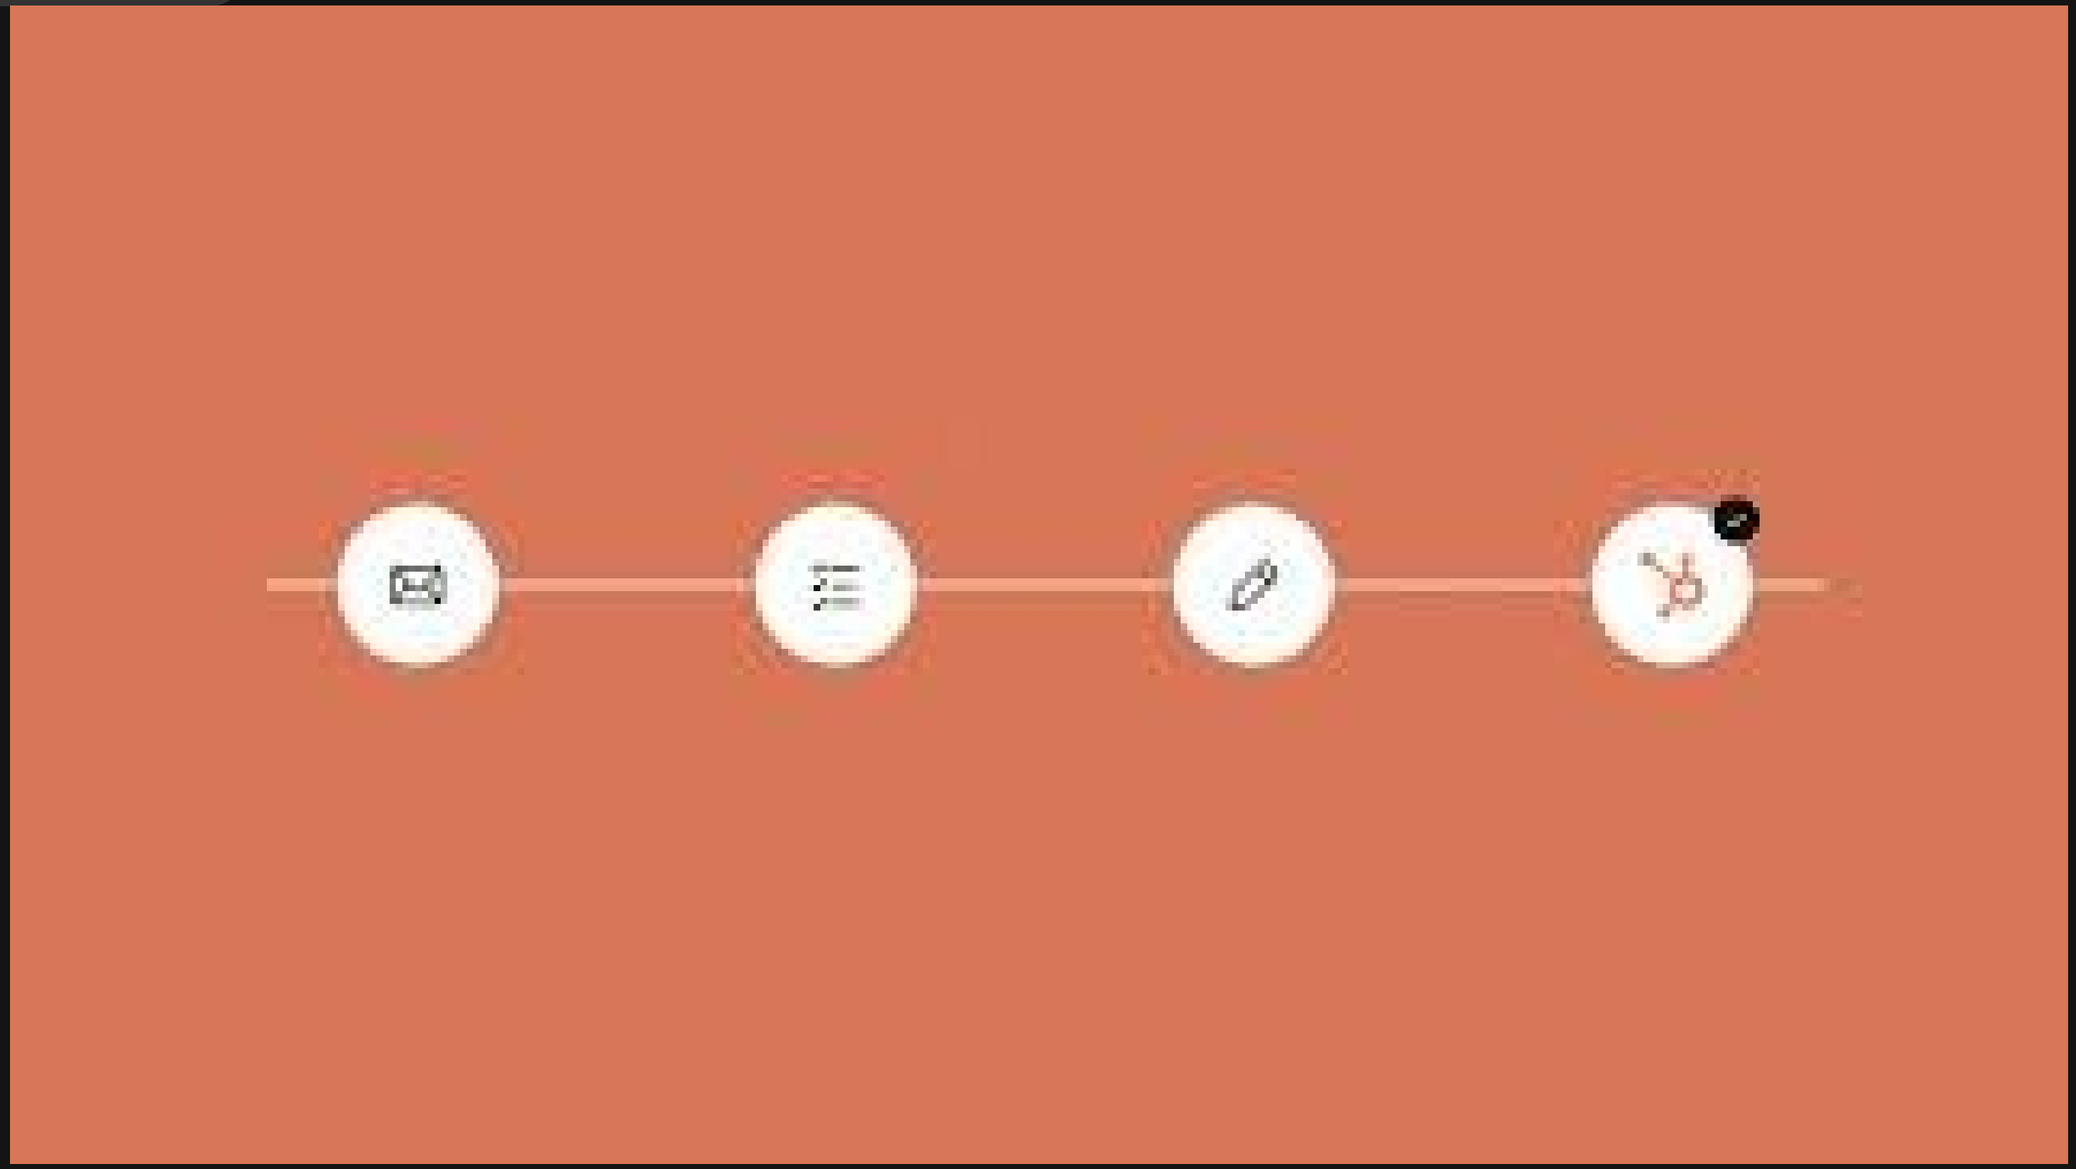

smb-onboard	one-time setup	speed-to-lead	on demand
business-pulse	Mon 8am	close-month	25th, 9am
customer-pulse-check	Thu 4pm	margin-analyzer	assisted
social-content-engine	Wed 10am · 25th	contract-review	on demand
proposal-builder	on demand	job-post-builder	when hiring

Projected, and being tested against a time log. Counts time saved only, not what those hours earn once reinvested.

“Claude gave me my Sundays back.”

Co-Owner, Bedroom & Sofa Discounters

See it in action

Keep it sharp

Three habits that keep it sharp

01

Teach it once

After any correction, say "remember this." Claude writes it to the right file.

02

Audit the session

At the end, ask "what did we miss?" Claude proposes what to save and where. You approve.

03

Right file, right place

Every few weeks, have Claude flag facts sitting in the rules file and rules sitting in memory.

Five minutes of upkeep. A new hire that gets better every week.

Q&A *Pause.*
